SKB TELSI

Moscow company SKB TELSI provides a range of services for the development, production and delivery of integrated communication systems for various purposes, which are used in health care institutions, in barrier-free environments, for the organization of dispatching communications, as well as in elevators and transport.

SKB TELSИ

Moscow company SKB TELSИ provides a range of services for the development, production and delivery of integrated communication systems for various purposes, which are used in health care institutions, in barrier-free environments, for the organization of dispatching communications, as well as in elevators and transport.

All components of personnel call systems, including consoles, intercoms and software, are designed and manufactured at the company's facility in Moscow under its own brands - GETCALL and HOSTCALL. All works on creation of the equipment are carried out in close contact with representatives of interested structures that allows developers of SKB TELSИ to consider all requirements of customers. SKB TELSИ is the leader in its segment in Russia and actively sells its products in Europe and Asia.

HostCall

The main products of SKB TELSИ are the personnel call systems for medical institutions under the brand name HostCall. At present, the fourth generation of room alarm systems is supplied.

The ward alarm system HostCall-CMP is designed for installation in medical rooms of hospitals. Patients can send a call to a nurse's post by pressing the alarm button installed in the ward. The nurse, in turn, can accept the call in three ways: on a remote control, on a smartphone or on a button cell phone as a text message.

In addition to the call button, the patient's room can be equipped with an intercom, with which it is possible to establish a voice communication with the post nurse. Call buttons are available in two modifications: radio and digital buttons, which transmit signals over the wires. Radio buttons allow you to reduce the time and cost of installation, but require regular battery replacement. When using digital wired buttons, the cost and time of installation increase, but the reliability of the system improves as well.

GetCall

The second most important product of the company is GetCall voice dispatch system. This equipment is widely used both in elevator control room and as two-way communication systems with security zones of 4 and 5 categories.

Devices with capacity from 1 to 36 subscribers are used as consoles in GetCall dispatching system. Subscriber devices are represented by a wide range: telephone handsets, plastic and vandal-proof loudspeakers, street devices.

Over 13 thousand control points are equipped with dispatching systems per year: lifts, entrances and exits to administrative buildings, elevators and escalators.

Company's financial results

The company's net profit in 2018 is

48,3 million rubles

The company's net profit from 2016 to 2018 has almost doubled, it has increased from 27.1 million rubles to 48.3 million rubles. The company's revenue in 2018 amounted to more than 195 million rubles, while exports - almost 8 million rubles.
