Software Product

Software Product Group of companies, founded in 2002, is engaged in the development of unique software products and information systems on the Russian IT market.

Software Product

Software Product Group of companies, founded in 2002, is engaged in the development of unique software products and information systems on the Russian IT market.

At the moment the company is among the top-10 largest Russian software developers, as well as one of the top 30 largest Russian IT-integrators. In April 2020, the Ministry of Communications included Software Product in the list of system forming companies of the Russian economy. The company implements large-scale IT projects at the federal and regional levels, which include development of project documentation, coordination and approval of regulations and regulatory documents, software development or upgrade, implementation and maintenance of IT infrastructure, as well as technical support

Software Product has obtained licenses and certificates, which are necessary for work with state authorities, for implementation of projects containing state secrets, and for projects in the field of information security.

The management of Software Product actively develops the company and strives to become a leader in the implementation of advanced technologies, implementing the most large-scale and significant IT projects in Russia.

The group companies employ over 700 specialists, most of whom are graduates of prestigious universities in Russia.

Implemented projects

Among the clients of the Software Product are listed: Federal Protective Service, Federal Security Service, Ministry of Internal Affairs, Ministry of Defense, Ministry of Digital Development, Communications and Mass Media, the Ministry of Labour and Social Protection, Ministry of Economic Development, Ministry of Finance, Ministry of Education, Federal Medical-Biological Agency (Russia), the Central Election Commission of the Russian Federation, Government of Moscow, Moscow Region Government, the State Duma, Supreme Court and others.

During the years of work on the IT market the company has successfully implemented more than 1 thousand projects, a number of which operate throughout the country and are used by a million audience.

Services

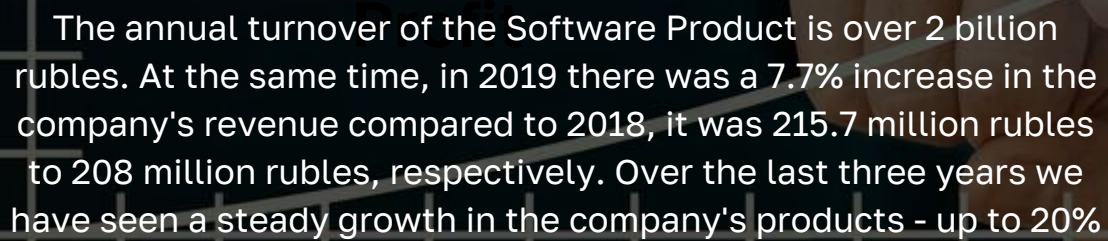

Software Product provides services in software and IT.

Software:

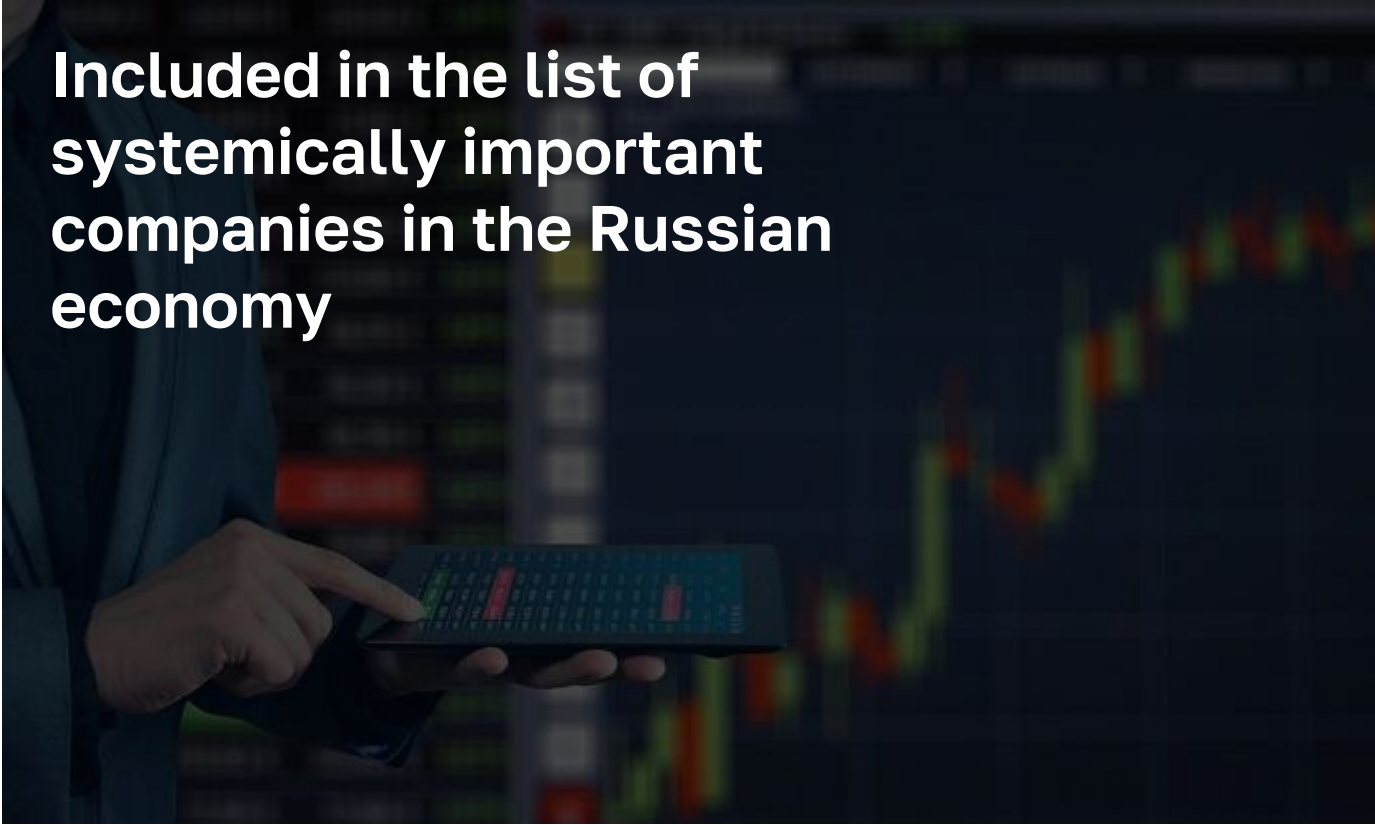

- Automated information systems: development, adaptation and implementation of software of various degrees of complexity;
- Provision of state services in electronic form: large-scale projects in state territorially distributed organizations;
- Internet and intranet solutions, which are widely used both in state and commercial organizations;
- Business analysis and visualization systems: creation, implementation and adaptation of highly loaded analysis systems of federal and regional levels;
- Mobile solutions: development of mobile applications for corporate and state customers;
- IT Service Management solutions: provide a single unified platform for managing various processes and services;
- Enterprise Asset Management systems: projects on automation of asset management processes;
- Big Data: huge arrays of different data, which serve as a source of valuable information;
- Solutions for Smart City;
- Blockchain solutions;
- Video analytics systems based on machine learning;
- Import substitution.

IT-services:

- An engineering center with its own dispatching and data processing center;
- Integration solutions;
- Information security (in full compliance with Federal Law 152-FZ);
- Support and technical support of IT infrastructure and application software;
- IT-consulting - preparation of various documents: departmental plans, development concepts, programs of events, etc.

The annual turnover of the Software Product is over 2 billion rubles. At the same time, in 2019 there was a 7.7% increase in the company's revenue compared to 2018, it was 215.7 million rubles to 208 million rubles, respectively. Over the last three years we have seen a steady growth in the company's products - up to 20%
