Svyazstroydetal

Svyazstroydetal is a leading Russian developer and manufacturer of products for construction of cable sewerage and installation of electrical and optical communication cables.

Svyazstroydetal

Svyazstroydetal is a leading Russian developer and manufacturer of products for construction of cable sewerage and installation of electrical and optical communication cables.

Since 2001, the company has been implementing and maintaining a quality management system. Its compliance with the standard GOST R ISO 9001-2015 is confirmed by a certificate. The quality management system provides for timely updating and modernization of production and product range with constant quality control of all products. The area of land occupied by the company is 3.4 hectares, its premises area is 16.5 thousand square meters. The company employs about 600 highly qualified employees. The products manufactured by the company are widely used by construction companies, operators, in particular, Rostelecom, MGTS, and alternative operators. The company also has representative offices in St. Petersburg, Novosibirsk, Ekaterinburg, Nizhny Novgorod and Krasnodar.

History of the company

With the accession of VOT production facilities in 2005, the company Svyazstroydetal has become one of the largest players in the market of optical sneakers and optical cords, supplying high-quality products of original designs, made with the use of Swiss components.

In 2008, the company Svyazstroydetal has the first solution for high density installation of optical fibers - cross VOKS-F. The solution is designed for use in the central offices of operators, in cases where the total number of fibers incoming and outgoing optical cables reaches 200 or more.

Products

The company has a modern fleet of equipment for the production of reinforced concrete structures, metalworking, plastic molding and production of optical cords, and is the leader of the Russian market for the development and production of couplings for fiber-optic communication cables. At the same time, reinforced concrete products for the construction of communication lines - the only one produced by Moscow companies are made using the technology recommended by the Research Institute of Concrete and Reinforced Concrete of the State Construction Committee of the Russian Federation, which provides maximum durability in an aggressive urban environment.

A total of more than

1000 items

terminal equipment, equipped with plinths with mortise contact, 10 pairs of core connectors for communication cables SMZh-10

For the development of new products and adaptation of existing products to the specific needs of customers, the company has organized a developed technical service consisting of design department, technology department of construction of cable communication lines, customer support service and quality, testing laboratory that allows you to produce climatic, mechanical and electrical testing of the products.

The staff of the company Svyazstroydetal is constantly searching for new materials and design solutions, developing, launching into production and improving its own products. The range is also updated through joint developments with industry research institutes, design bureau, plants and other organizations.

Training

One of the structural subdivisions of Svyazstroydetal is the non-State Vocational Institution of Further Education SSD Training Center, the main task of which is to improve the skills of specialists involved in the installation and operation of communication lines and using technologies and solutions offered by the company.

4 facts:

1. Leading Russian developer and manufacturer of products for the construction of cable ductwork and installation of electrical and optical communication cables.
2. The company's products are widely used by construction companies and operators.
3. Svyazstroydetal has the status of Moscow industrial complex.
4. The company has its own training center, whose main task is to improve the skills of specialists.
